Professional Works

Crane Naval Base – Automated Acres
Programmer (GameMaker)

January – May 2025

- Developed an educational game to teach middle and high school age students about AI and its uses, utilizing fun theming, pixel art, and educational minigames to promote engagement and understanding of the material.
- Implemented character customization elements to allow players to better engage with the material while promoting diversity and inclusion.

Revature – Fullstack eCommerce Application
Front End Lead

May 2024

- Developed a mock eCommerce website in the vein of eBay as part of a twenty-person team over a two-week timeframe utilizing React JS, Spring Boot, and AWS allowing users to post products for sale and “purchase” these products.
- Spearheaded front-end development by defining necessary components to ensure timely completion of tasks and adherence to settled upon user stories.
- Oversaw the continuous integration of front-end code by handling Github pull requests, ensuring seamless integration of code from multiple programmers and allowing for easier integration with the project’s back-end codebase.

Crane Naval Base – The Mystery of Vee Island
Programmer (HTML/CSS/JS)

January – May 2023

- Developed an educational game to teach engineering principles in a manner that promotes engagement and information retention using story elements, pixel art, and minigame mechanics.
- Implemented exploratory areas of the game to allow players to obtain information at their own pace, allowing for greater understanding and retention of material.
